

MyDesktopLife – CMS - Tests

I've made some corrections in case the ressources are sorted by films.
I hope my english is clear enough

1- The “welcome screen”

The ressources will be placed in each film. In my example, the firts film is called “studio”, the 2nd one “otherfilm”.

[Films](#) | [Resources](#) | [Admin](#) | [Logout](#)

Welcome, stephanie

My Films

Choose a film to edit:

.json	what is this one? i couldn't open it and can't delete it... :-)	Copy	Rename	Delete
studio		Copy	Rename	Delete

[Manage my resources](#)

Here you can add and remove the images, sounds, and fonts which are used ~~across all your films.~~ **in your film «studio»**

other film		Copy	Rename	Delete
------------	--	------	--------	--------

[Manage my resources](#)

Here you can add and remove the images, sounds, and fonts which are used ~~across all your films.~~ **in your film «other film»**

Create new film

My resources

Here you can add and remove the images, sounds, and fonts which are used across all your films.

[Manage my resources](#)

**and leave this part to browse
through all media**

2- The stage-screen

Next to the checkbox, one should write "hide" if the timeline and so are open, and "show" if they are not shown.

And the navigation to go back to the "welcome"-screen should be also created.

The screenshot shows a web browser window with the URL `cms.mydesktoplife.org/show/stephanie/?script=studio`. The browser's menu bar includes "Chrome", "Fichier", "Modifier", "Afficher", "Historique", "Favoris", "Personnes", "Fenêtre", and "Aide". The page content features a navigation menu with "Films", "Resources", "Admin", and "Logout". A red annotation states: "This navigation menu should be also be on this screen with a submenu (see on next screen)".

Below the navigation menu, there is a "hide or show" checkbox with two arrows pointing to it. A red annotation says: "we should put the text of the function next to the checkbox".

Two editor windows are open:

- MDL Actor Editor:** Shows a "Selected actor: texte" and "Actor Properties" including Depth (10), Font size (48px), Font (Times), Color (rgb(255, 255, 255)), Click link, and Effect (None). A "Delete" button is at the bottom.
- MDL Timeline Editor:** Shows a timeline with a selected event "mon texte TEST". The "Event Properties" panel includes fields for actor (texte), depth (-1), text (mon texte TEST), in (1000), wait (2000), out (1000), and style (Mouchette little fly). A "Delete" button is at the bottom.

At the bottom of the browser window, a red annotation reads: "All times are in milliseconds."

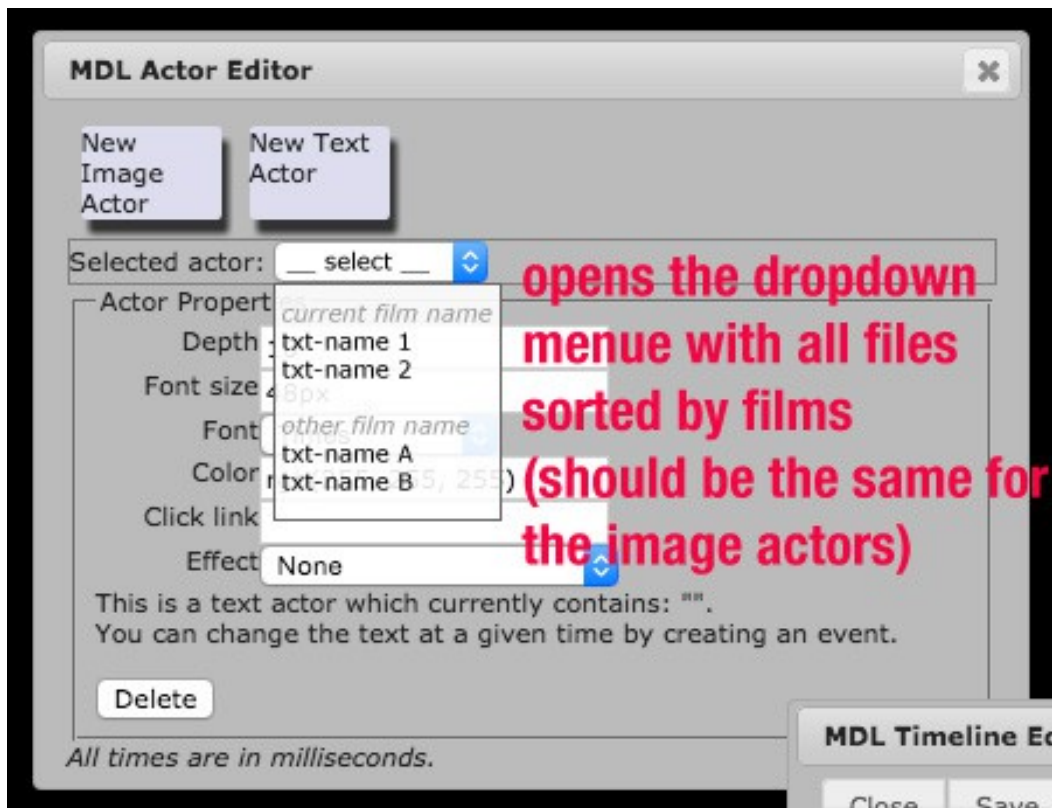

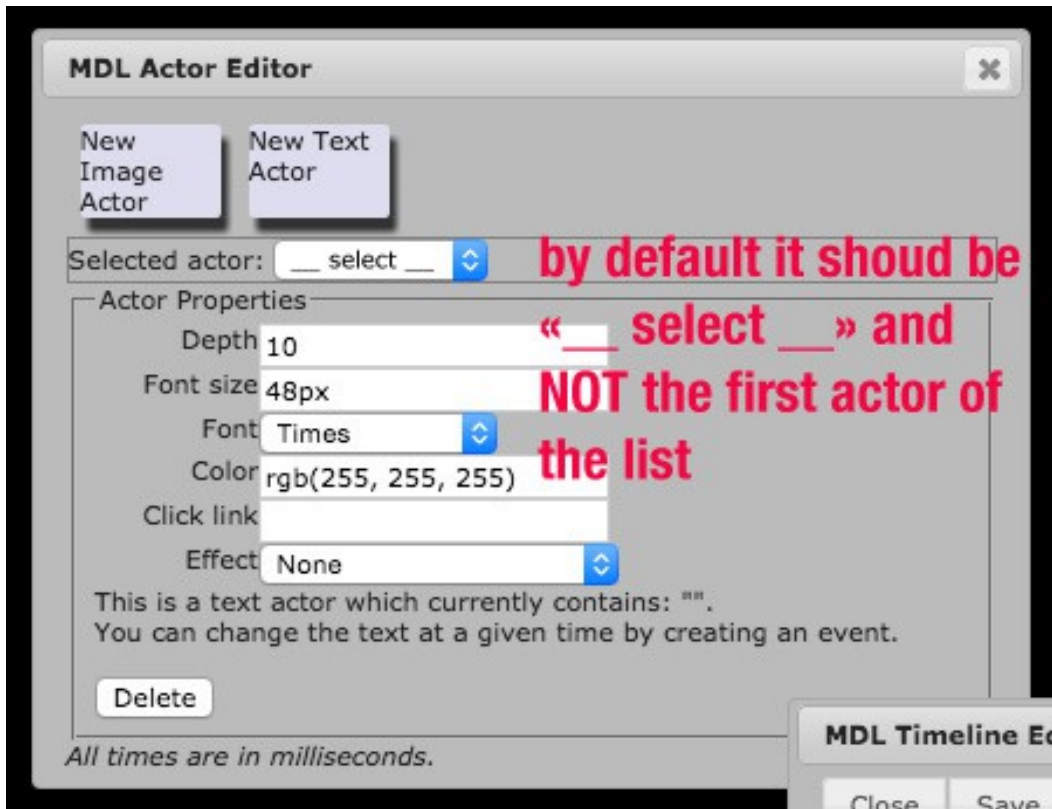

The navigation with a sub-navigation

The screenshot shows a Chrome browser window with the URL `cms.mydesktoplife.org/show/stephanie/?script=studio`. The navigation menu at the top includes [Films](#), [Resources](#), [Admin](#), and [Logout](#). Below the menu, there are two options: **film «studio»** and **film «other film»**. A red annotation states: **one can choose the film**. Two editor windows are open: the **MDL Actor Editor** window shows a selected actor of 'texte' with properties like Depth (10), Font size (48px), Font (Times), Color (rgb(255, 255, 255)), Click link, and Effect (None); the **MDL Timeline Editor** window shows a selected event with the text 'mon texte TEST'.

The screenshot shows the same browser window. The navigation menu is the same, but the options below are **film «studio»**, **film «other film»**, and **all**. A red annotation states: **one can choose the ressources sorted by films or «all»**. The **MDL Actor Editor** and **MDL Timeline Editor** windows are identical to the previous screenshot.

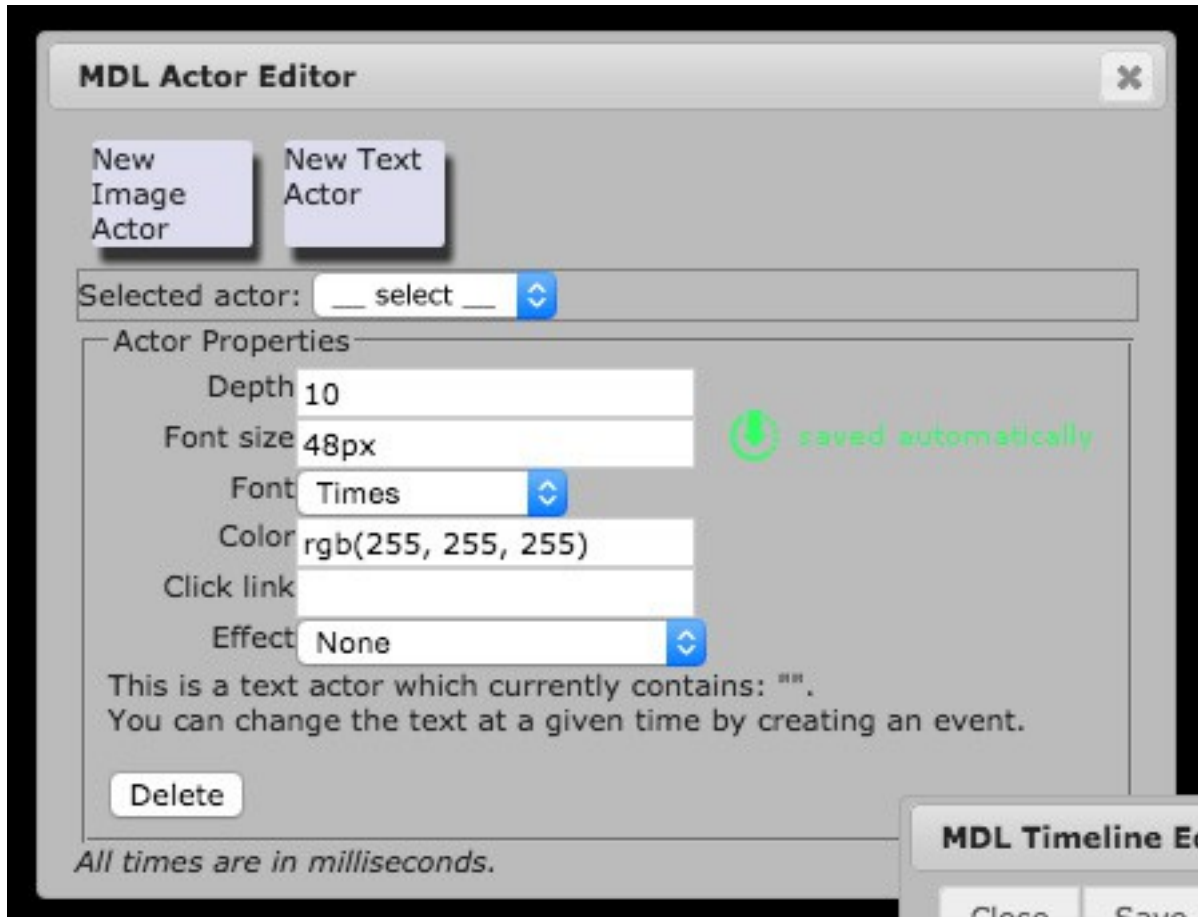

3- Dropdown menu "selected actor"

By default, the first actor of the list is selected. This is disturbing, because if it is the actor one wants to use, one doesn't understand that it has to be selected again. So it would be better to put "_ select _" as default. If the dropdown menu is opened, the actors are sorted by films.

4- Automatic save

I've seen that there is an "automatic save" as soon as one has done an action (for example, chosen a different font size, etc.). It would be better if one could visualize it (like on some CMS, even wordpress I think). A small icon would appear (+ line of text next to it) and disappear.

5- Font color

If one clicks in the field "Color", a color cubes box should open. Do we have the possibility to put the HEX # colors ?
